

SALTSTACK® Protect

It's time to stop managing vulnerabilities and start fixing them.

Find and fix vulnerabilities from a single platform

According to Gartner, 99% of exploited vulnerabilities are known to security and IT professionals before the security breach. Unfortunately most security tools are designed to find issues, not fix them. It's time to stop triaging and prioritizing and start securing your business with a vulnerability solution that acts.

SaltStack® Protect, a product included in the SaltStack SecOps suite, uses event-driven automation and closed-loop infrastructure control to deliver real IT security and continuous compliance. With SaltStack Protect, security and operations teams can work together to define a corporate security policy, scan all systems against it, detect vulnerabilities, and actively remediate them—all from a single platform.

"SaltStack SecOps gives our security and site reliability teams the ability to efficiently tackle the difficult task of achieving continuous infrastructure compliance across 55 world-class data centers. SaltStack vulnerability scanning and automated remediation will help Cyxtera certification processes and ultimately deliver powerful, secure IT infrastructure to our demanding customers."

Zach Hilliard, Cyxtera, Director of Site Reliability Engineering

Leverage a live, aggregated CVE database

SaltStack actively ingests vendor CVE advisories, builds scans and remediation workflows to address them, and delivers this security content to customers as a service. Security and operations teams can then use SaltStack configuration automation to check installed package versions on all systems, identify vulnerabilities, and install patches to remediate them.

Operating systems:

- Red Hat
- CentOS
- Ubuntu
- Oracle Linux
- Debian [coming soon]
- SLES [coming soon]
- Amazon Linux [coming soon]
- Windows [coming soon]

Infrastructure:

- 25+ public cloud providers
- VMware
- Private cloud
- On-prem

Detect and remediate critical vulnerabilities

SaltStack Protect scans your hybrid IT infrastructure against more than 12,000 CVEs and indicates the severity of every issue detected. When you're ready, intelligent orchestration workflows will automatically remediate the issue—including distributed patch download and asynchronous, multi-step updates at massive scale.

Part of the SaltStack SecOps Suite

SaltStack Protect is one of the products available in the SaltStack SecOps Suite, designed to help IT operations and security teams use event-driven automation to detect security and compliance risks, and automatically remediate them. SaltStack also offers powerful integrations, IT system and network control, and much more.
